

Contents

Chapter 1. Introduction to plant biology

Chapter 2. Different types of tissue

2.1. Primary meristem (root and cellular)

- 2.1.1. Primary tissues
- 2.1.2. Protective tissues (epidermis)
- 2.1.3. Filling tissues (parenchyma)
- 2.1.4. Support tissues (collenchyma and sclerenchyma)
- 2.1.5. Conductive tissues (primary xylem, primary phloem)
- 2.1.6. Secretory tissues

2.2 Secondary (lateral) meristems (cambium and phellogen)

- 2.2.1. Secondary tissues
- 2.2.2. Conductive tissues (secondary xylem and secondary phloem)
- 2.2.3. Protective tissues (suber or cork, phelloderma)

Chapter 3. Anatomy of higher plants

- 3.1.** Study of the root
- 3.2.** Study of the stem
- 3.3.** Study of the leaf
- 3.4.** Comparative anatomy of mono- and dicotyledons

Chapter 4. Morphology of higher plants and adaptation

- 4.1.** Roots
- 4.2.** Leaves
- 4.3.** Stems
- 4.4.** Flowers
- 4.5.** Seeds
- 4.6.** Fruits

Chapter 5. Gametogenesis

- 5.1.** Pollen grain
- 5.2.** Ovule and embryo sac

Chapter 6. Fertilisation

- 6.1.** Egg and embryo
- 6.2.** Concept of the development cycle
